now! minimo

They grow up so quickly - so it's just as well the furniture can adapt accordingly. now! minimo has been designed as a baby's and young children's range for minis of all sizes: it not only provides space for your baby's dreams and for changing nappies, it accompanies the child through its first steps in life with a twinkle in the eye. By changing the set of handles now! minimo converts into a beautifully formed junior's room. Rounded edges and handles ensure safety, convertible units ensure long-term use and some loving details provide the inspiration for some wonderful bed-time stories.

Sketch raster for the now! minimo range

● ● ● made in germany

Please superimpose unlined paper and write firmly. In order to avoid slipping, use 2 paper clips or fold the edge of the drawing sheet.

Check list

- 1.) Do the **sketch and the order** match? Do the **dimensions and the sketch** match the type number? Are all **type numbers** correctly stated in the sketch?
Can one see the **position of door hinges**?
- 2.) Are all **type numbers** correct? Have you perhaps confused **price and type numbers**?
- 3.) In combinations of **versions**: is it clear which units are to be delivered in which version?
- 4.) Are all **accessories** such as fitted shelves etc. included in the sketch?
- 5.) Is this an **additional order**? If so, when was the **original order**? If possible, include a sketch on which the existing and new units are clearly marked.

Please also remember the planning notes on the introductory pages!

Important note!

Please do not forget to include the following details with each order. This avoids time-consuming correspondence and unnecessary delays in delivery.

Version(s)	Customer	Date	Commission
------------	----------	------	------------

Wall fitting

Important notes:

Generally speaking, you as a dealer/qualified fitter are responsible for the correct wall mounting of the units. That is why wall mounting should only be carried out by properly trained and qualified fitters. hülsta supplies materials for mounting units on walls for nearly all the units and which should be used for safety and for constructional reasons. The assembly materials supplied by hülsta (plugs, screws) are only suitable for fitting components on to concrete in firmness class C12/15.

For other materials (please see next page) we provide you with an assembly mortar set as an extra order. Please note that this assembly mortar set is also only suitable for the materials listed in the materials table. If walls are made up of other materials (e.g. plastered or lighter wall materials), one should use another method of mounting better suited to the load on site. Please note that if the units are not mounted properly on the wall, there is a risk of the units falling down or tipping over – especially when alternative mounting materials acquired on site have been used.

For the reasons stated above it is absolutely essential to enquire about the composition of any walls before signing any contracts.

Further notes:

If 2 - 8 Raster (assembly) units are included as wall units, a maximum load per unit of 40 kg must not be exceeded for reasons of stability!

The wall units can only be fitted on absolutely solid walls. Light masonry is not suitable for this purpose.

If (assembly) units are stacked on top of one another, a wall bracket must be ordered for each stacked unit.

For each project please remember to leave a 2.0 cm gap at the top to be able to mount units.

Maximum loads

Maximum loads

Max. load of wooden and glass (fitted) shelves (up to 70.5 cm wide) and drawers: 25 kg

Max. load of wooden and glass (fitted) shelves (between 70.5 and 105.7 cm wide): 15 kg

Max. load of wooden and glass (fitted) shelves (from 105.7 cm wide): 10 kg

Max. load of cover shelves: 35 kg per metre length for floor units.

Please also note any maximum loads which may be stated in the type list for the individual units!

Wall composition / assembly instruction

Important notes:

The composition of walls must be ascertained before concluding a contract and be checked by a qualified fitter before assembly takes place. Assembly may only be carried out by a qualified fitter under careful observation of the assembly instructions.

The plastic Rawl plugs supplied by hülsta as a standard set are only suitable for concrete \geq C12/15, if the wall composition and compression strength corresponds to the table below. Under no circumstances must a unit be assembled on light masonry.

Furthermore, we provide a mounting set with assembly mortar for the types of walls listed below (see assembly mortar set below). Again, assembly must be carried out by a qualified fitter under careful observation of the wall composition and assembly instruction. The compression strength levels stated below must be met under all circumstances.

Materials table

with a description of which sets are to be used with the following types of walls:

Standard set	Assembly mortar set only suitable for the materials stated below!	
Concrete C12/15 Compression strength \geq 15 N/mm ² 	 Building bricks Mz 12 Compression strength \geq 12 N/mm ²	 Solid blocks of light concrete V2 Compression strength \geq 2 N/mm ²
	 Limestone blocks KS 12 Compression strength \geq 12 N/mm ²	 Perforated blocks of light concrete Hbl 2 Compression strength \geq 2 N/mm ²
	 Perforated sand lime bricks KSL12 Compression strength \geq 12 N/mm ²	 Aerated concrete PP2 Compression strength \geq 2 N/mm ²
	 Vertically perforated bricks HLz 12 Compression strength \geq 12 N/mm ² Bulk density \geq 1.0 kg/dm ³	

A different and more suitable type of mounting must be chosen by a qualified fitter in all other cases. hülsta cannot accept any responsibility for the choice of any other types of mounting! Please note that if the units are not mounted properly on the wall, there is a risk of the units falling down or tipping over – especially when alternative mounting materials acquired on site have been used. Generally speaking, you as a dealer/qualified fitter are responsible for the correct wall mounting of the units.

Mounting sets

Labelling in type list drawings / assembly notes for wall units

The majority of units have two wall mounting points (= number of support boards), if these are to be fitted as wall units. This is not explicitly mentioned in the type list. If a different number of wall mounting points (= support boards) is required, this is marked in the drawings in the type list with numbers in black boxes. Every support board requires four mounting screws.

3 = 3 support boards

4 = 4 support boards, etc.

One **assembly mortar set** is sufficient for up to a maximum of 3 support boards or 4 wall side-panels.

Important note: Depending on the composition of the wall (see wall types illustrated above), assembly must be carried out using the special assembly mortar set and a standard cartridge applicator tool which are the basic essentials for safe and clean workmanship.

Standard set

The standard set consists of 4 plastic Rawl plugs and 4 mounting screws and is sufficient for 1 support board. The standard sets are included in the packet of fittings to match the number of support boards.

Assembly mortar set for up to a maximum of 3 support boards consisting of:

- 9x injection retaining sleeve
- 9x screw-in sleeve
- 1x injection cartridge
- 2x static mixer
- 1x assembly instructions

Please use the mounting screws from the standard set (supplied free of charge).

Example of order:

- Add up number of support boards for all existing unit types
 - Divide the sum by “3”
 - Round up the result to a full number
- = Number of assembly mortar sets required
